Template for Computer Programming I Practical Recording

Date : 23/01/2023

Problem Specification : Determine the raise and new salary for an employee by adding if …else statements to compute the raise

Assumption : The user inputs are valid.

Limitation : salary = N/A rating:1<= rating<=3

Input : Input the current annual salary for the employee and a number indicating the performance rating.

Processing : the program read the salary and rating. Then, calculate the raise of Salary using rating percentage. then ,calculate total salary

Output : print the total salary

Algorithm :

Step1 :Prompt "Enter the performance rating:"
Step2: Initialize variable currentsalary for annual salary
Step3: Read the input currentsalary given by user
Step4: Assign input value for currentsalary
Step5:Prompt "Enter the performance rating: "
Step6: Initialize variable rating for performance
Step7: Read the input rating given by user
Step8: Assign input value for rating
Step9: if(rating==1) is true
    Initialize variable :raise1 ← currentsalary*3/100;
    Print raise1 as "Amount of your raise: $"
    Print (raise1+currentsalary) as "Your new salary :$"+

Step10: Else if(rating==2) is true
    Initialize variable :raise3 ← currentsalary*3/100;
    Print raise2 as "Amount of your raise: $"
    Print (raise2+currentsalary) as "Your new salary :$"+

Step9: Else if(rating==3) is true
    Initialize variable :raise3 ← currentsalary*3/100;
    Print raise3 as "Amount of your raise: $"
    Print (raise3+currentsalary) as "Your new salary :$"+

Step11: End the program

Programe listing :Program file attached

Test data and expected output : **1. Test data:** currentsalary: 45000
Rating : 2

Expected output: Amount of your raise: $1800.0

Your new salary: $46800.0

Output obtained for test data : **1. Test data** currentsalary: 45000
Rating : 2
2. Obtained output **:** Amount of your raise: $1800.0
Your new salary: $46800.0

Discussion **:** The implementation was successful in meeting the requirements

Conclusion **:** The program accurately calculates the raise based on the performance rating and adds it to the current salary to compute the new salary.
