

Template for Computer Programming I Practical Recording

Date	:	16/01/2025
Problem Specification	:	calculate the area for Square, Rectangle and Triangle
Assumption	:	The user input is valid integer.
Limitation	:	N/A
Input	:	Enter the width of the square, the width and length of the rectangle, and the width and height of the triangle
Processing	:	The area of the square, rectangle and triangle are calculated using Formula
Output	:	Display the area of the square, rectangle and triangle
Algorithm	:	Step 1: Prompt "Enter the width of the Square" Step 2: sqw = user input Step 3: Prompt "Enter the width of the Rectangle" Step 4: rew = user input Step 5: Prompt "Enter the length of the Rectangle" Step 6: rel = user input Step 7: Prompt "Enter the width of the Triangle" Step 8: triw = user input Step 9: Prompt "Enter the height of the Triangle" Step 10: trih = user input Step 11: Read sqw, rew, rel, triw, trih Step 12: areaOfSquare = sqw * sqw areaOfRectangle = rew * rel areaOfTriangle = (triw * trih) / 2 Step 13: print value of areaOfSquare as "The AreaOfSquare is :", Print value of areaOfRectangle as "The AreaOfRectangle is : " Print value of areaOfTriangle as "The AreaOfTriangle is :"
Programme listing	:	Program file attached
Test data and expected output	:	1. Test data: sqw=10,rew=10,rel=10,triw=10,trih=10 Expected output: The areaOfSquare is :100 The areaOfRectangle is :100 The areaOfTriangle is :50

Output obtained for test data : 1. Test data: sqw=10,rew=10,rel=10.triw=10,triw=10
Expected output: The AreaOfSquare is :100
The AreaOfRectangle is :100
The AreaOfTriangle is :50

Discussion : Discuss the challenges or take away note for this program

Conclusion : Summarize the problem it aims to solve.
