

Template for Computer Programming I Practical Recording

Date	:	16/01/25
Problem Specification	:	Convert the temperature in Celsius to Fahrenheit
Assumption	:	The user input is valid integer.
Limitation	:	N/A
Input	:	Input temperature in Celsius
Processing	:	Convert the temperature in Celsius to Fahrenheit using formula.
Output	:	Output temperature in Fahrenheit
Algorithm	:	Step1: Prompt as “ Enter the temperature in celsius ”. Step2: Initialize variable c for Celsius. Step3: Read the input c given by user in Celsius. Step4: Assign input value for c. Step5: Initialize f as $f \leftarrow (c * 9 / 5) + 32$ Step6: print value of f as “The temperature in Fahrenheit is : ” Step7:End the program
Programme listing	:	program attached
Test data and expected output	:	1. Test data: c = 300 Expected output: 572.0
Output obtained for test data	:	1. Test data: c=300 Obtained output: 572.0
Discussion	:	Discuss the challenges or take away note for this program
Conclusion	:	Summarize the problem it aims to solve.
